

Phylogenetic Placement of Short Reads

Visualization, Species Delimitation
and Taxonomic Annotation

Input Data

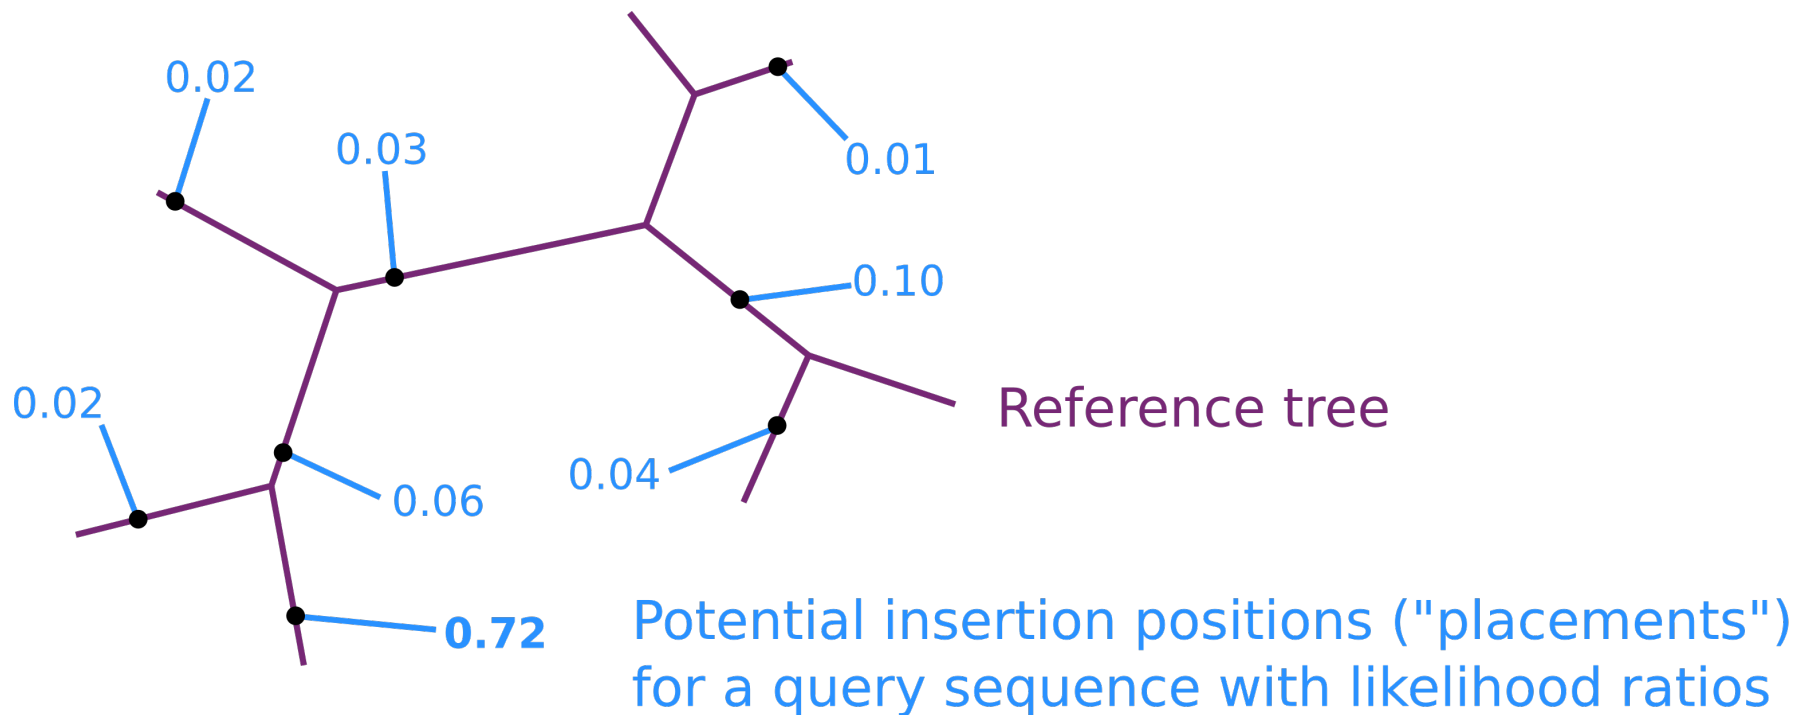

Reference Tree

Reference Sequences

Query Sequences

Evolutionary Placement (EPA)

Visualization

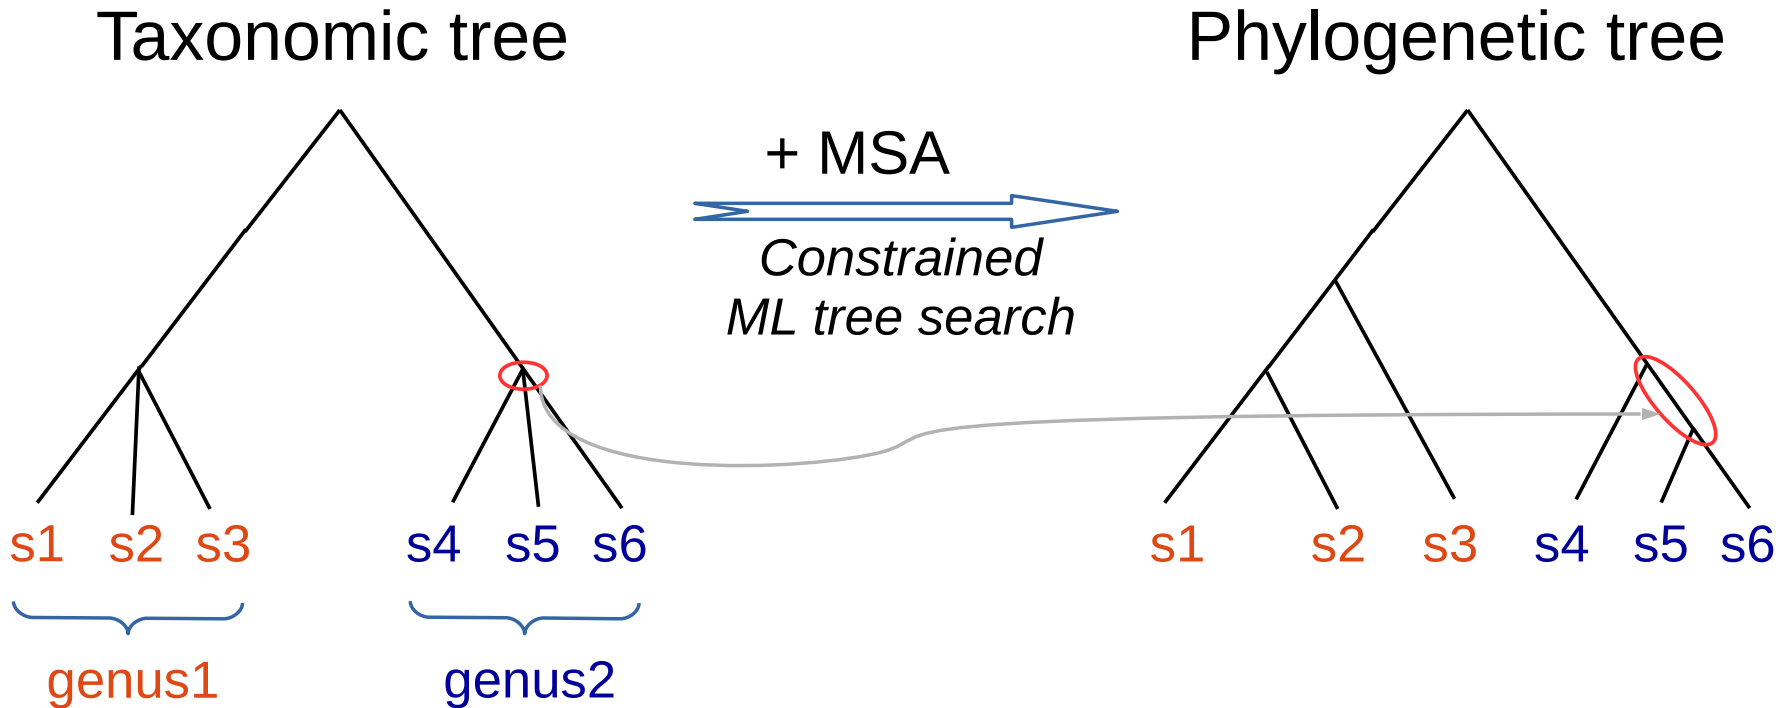

Species Delimitation (PTP)

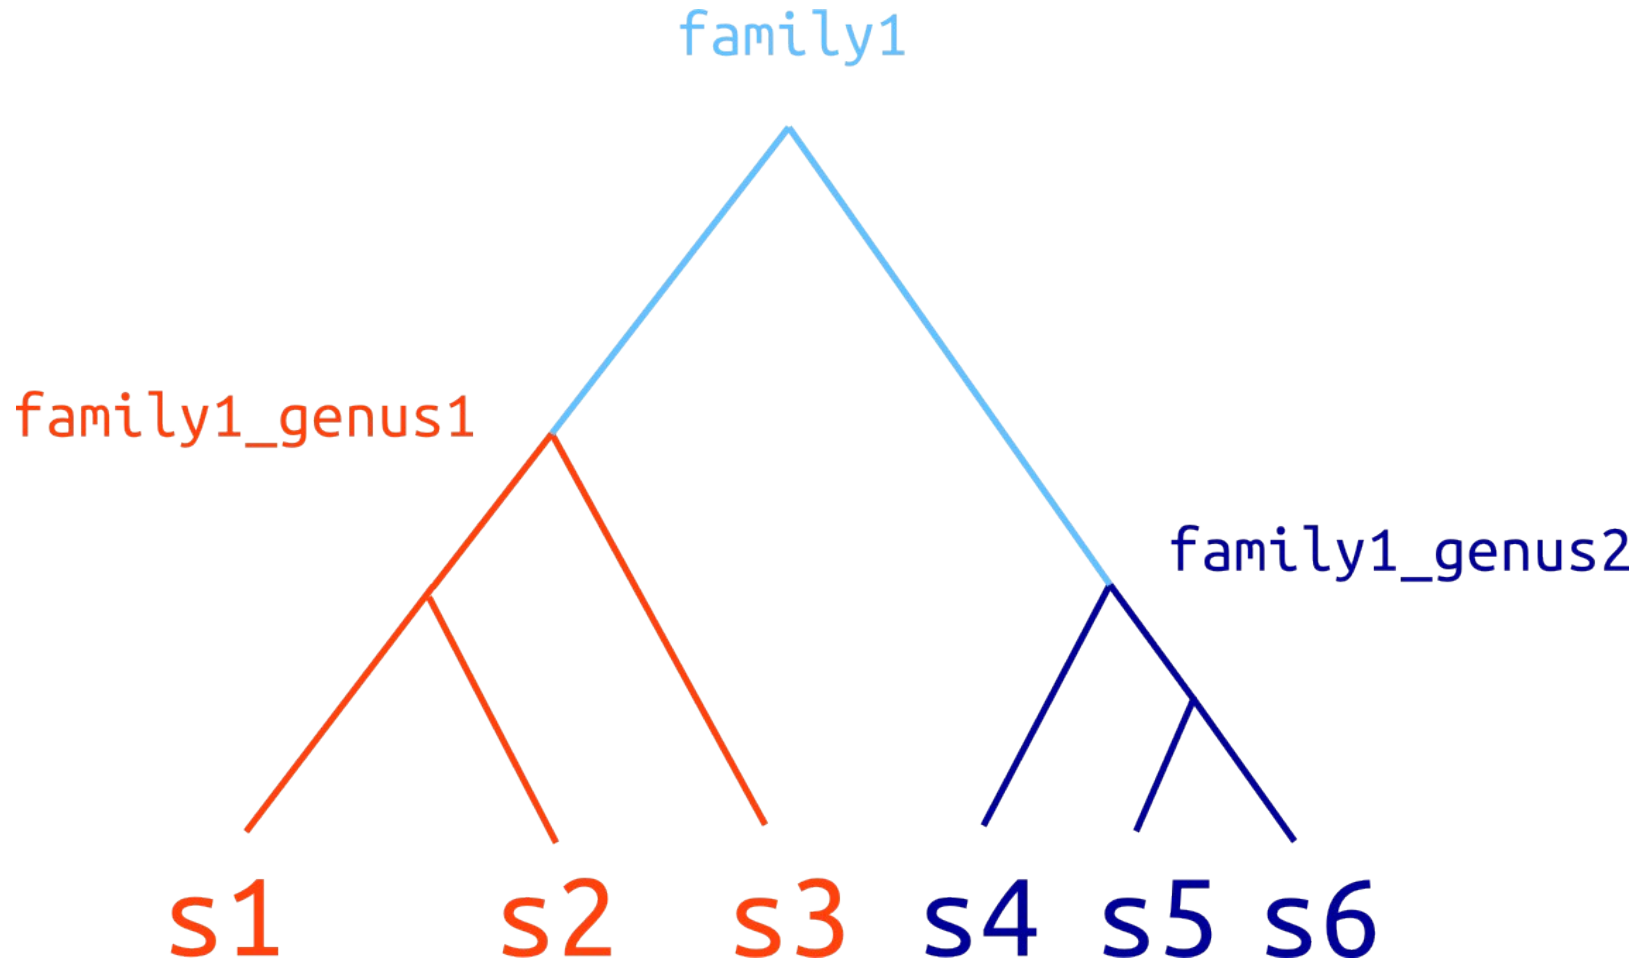

Taxonomic Annotation with EPA

Step 1: Build Reference Tree

Taxonomic Annotation with EPA

Step 2: Label the Branches

Taxonomic Annotation with EPA

Step 3: Run EPA

Taxonomic Annotation with EPA

Step 4: Derive Taxonomic Annotation

Software

- PaPaRa: Align Short Reads to Reference MSA

Taxonomic Annotation with EPA, Revisited

Per-rank LW score evaluation:

$$\text{LW}(\text{family1_genus1}) = 0.1 + 0.1 + 0.3 + 0.2 = 0.7$$

$$\text{LW}(\text{family1}) = 0.15 + 0.05 = 0.2$$

$$\text{LW}(\text{family1_genus2}) = 0.05 + 0.03 + 0.02 = 0.1$$

Final assignment: **family1_genus1**

Confidence family / genus: 1.0 / 0.7

Clade Annotated Tree
